

INSTRUCTIONS:

There are five (5) sentences that DO NOT BELONG (i.e., they are not appropriate, grammatically incorrect, etc.) – leave them blank or put an X on the line in front of those five (5) sentences. [Follow the instructions above . . .](#)

↳ ... NOT these.

THE DIAGRAM SHOWS HOW ELECTRICITY IS GENERATED BY A HYDROELECTRIC DAM.

DESCRIBE THE KEY PARTS OF THE PROCESS AS SHOWN IN THE PICTURE.

SUMMARIZE THE INFORMATION SHOWN IN THE PICTURES BY SELECTING AND REPORTING THE MAIN FEATURES, AND MAKE COMPARISONS / CONTRASTS WHERE RELEVANT.

looks like.

- ___ a) It is interesting to note that a hydroelectric dam creates no harmful byproducts and relies entirely on natural forces to produce electricity.
- ___ b) We all need water because it is important for our bodies to function properly.
- ___ c) First of all, water trapped in the reservoir behind the dam is forced through an intake.
- ___ d) The diagram illustrates the basic principles of hydroelectric power.
- ___ e) Water (H₂O) is an essential inorganic compound for life on Earth.
- ___ f) The dam creates a large reservoir, and the powerhouse is where the electricity is generated.
- ___ g) The resulting electricity leaves the powerhouse via cables that carry it over long distances to where it can be used.
- ___ h) Thanks to all of this, it is a renewable process.
- ___ i) The process requires the construction of a large dam connected to a powerhouse.
- ___ j) As a result of the water cycle in nature, the process is renewable.
- ___ k) The turbine is connected to a generator in the powerhouse above, which is where the movement of the turbine is converted into electricity.
- ___ l) Water faces numerous pressures, including pollution from chemicals, nutrients, and pharmaceuticals, and the impacts of climate change.
- ___ m) It then flows into a narrow chamber called a penstock, where the resulting high pressure turns a turbine.
- ___ n) The picture shows us how electricity is generated by a hydroelectric dam.
- ___ o) After the turbine stage, water flows out through a second channel and into a river.
